

LEO LEONG

(65) 90065959 | leongdingxuan@gmail.com | [LinkedIn](#) | [GitHub](#)

Currently serving National Service, available for full-time work from 2nd August 2026

SUMMARY

Diploma graduate in Cybersecurity & Digital Forensics from Temasek Polytechnic with hands-on experience in software development, networking, and cybersecurity. Built and deployed a live IoT air quality monitoring platform on Azure as a Final Year Project. Completed an internship at Trend Micro developing POC security demonstrations for enterprise clients. Seeking an entry-level software development ahead of pursuing a Computer Science degree.

SKILLS

Programming: Python, Java, JavaScript, PHP, HTML/CSS, SQL

Frameworks & Tools: Express.js, EJS, Sequelize ORM, MQTT.js, Nodemailer, Git

Cloud & Databases: Microsoft Azure, MySQL

Cybersecurity Tools: Burp Suite, Nmap, Metasploit, FTK Imager, Autopsy, Kali Linux, Wireshark

Networking: Cisco Packet Tracer

Data Tools: KNIME, Power BI

Systems: Linux (Red Hat), VirtualBox, Android Studio

Certificates: AWS Academy Cloud Foundations, NDG Linux Unhatched

WORK EXPERIENCE

Technical Intern | Trend Micro

April 2023 – September 2023

- Developed POC documentation for Trend Micro security products by deploying controlled VM environments, injecting test malware, and validating detection, logging, and remediation behaviour — producing reports used by Sales Engineers in client presentations
- Supported Sales Engineers and Technical Account Managers in delivering cybersecurity solutions to clients, coordinating technical requests across departments

Part-Time Roles (Retail, Banquet, F&B, Warehouse)

2019 – 2024

- Developed strong communication and problem-solving skills through diverse customer-facing roles in fast-paced environments
- Demonstrated ability to work under pressure and manage multiple tasks in fast-paced environments

PROJECTS

EcoSaver — IoT Air Quality Monitoring Platform | Node.js, Express, MySQL, Azure, MQTT, EJS

- Designed and built a full-stack air quality monitoring web platform integrating live IoT sensor data via the MQTT protocol, deployed on Microsoft Azure with a custom domain and SSL/TLS certificates
- Developed a consumer-facing website displaying real-time and historical air quality metrics (PSI, NO2, SO2, CO, O3, Temperature, Humidity) with daily and weekly data visualisation charts
- Built a separate admin management portal with dashboards for server uptime, database status, CPU monitoring, user management, sensor management, and API log tracking
- Designed and documented a RESTful API with token-based authentication, enabling third-party access to sensor data
- Implemented user authentication, session middleware, password reset via email (Nodemailer), and database modelling using Sequelize ORM on Azure MySQL
- Configured Linux server environment including reverse proxy routing, systemd service management, and Let's Encrypt SSL certificate integration

Penetration Testing Engagement | *Nmap, Burp Suite, Metasploit, Kali Linux*

- - Conducted a simulated professional penetration testing engagement, applying the Cyber Kill Chain methodology to systematically identify vulnerabilities across a target network
- Used Nmap for network reconnaissance, Burp Suite for web application testing, and Metasploit for exploitation; produced a remediation report with recommended countermeasures

Mobile Music Player Application | *Java, Android Studio, Firebase, Adobe XD*

- Designed a high-fidelity prototype in Adobe XD and built a full-featured social music app with login/authentication, music playback, user profiles, posts, live chat, and event features
- Integrated Firebase for backend data management and a Lyrics API for real-time lyric display

Company Network Infrastructure Design | *Cisco Packet Tracer, VLAN, IP Calculation*

- Acted as Network Consultant for an MNC, designing and configuring WAN connectivity between Southeast Asia offices and overseas cloud facilities, alongside LAN configuration for each office
- Implemented VLAN segmentation and IP calculation to ensure secure, reliable cross-country host communication

COVID-19 Data Analysis & Predictive Modelling | *KNIME, Power BI*

- Analysed Singapore COVID-19 datasets to derive insights on infection trends, specifically to inform whether government preventive measures should focus more on local or imported cases
- Performed data preprocessing and cleaning in KNIME, built predictive models, and produced interactive dashboards and charts in Power BI

Website Security Implementation | *PHP, SSL, CAPTCHA, Penetration Testing*

- Developed a secure PHP-based webpage with encryption, CAPTCHA, and SSL features
- Conducted basic penetration testing to identify and document vulnerabilities

EDUCATION

Diploma in Cybersecurity & Digital Forensics | *Temasek Polytechnic* April 2021 – May 2024

- Admitted into the Director's List for AY2021/2022 for excellent academic performance
- Recipient of Edusave Certificate of Academic Achievement, 2022
- Achieved multiple A grades across key modules
- Achieved Distinctions in Network Technology, Coding and Development Project

Cambridge GCE O-Level | *Pasir Ris Secondary School* 2016 – 2020

- Recipient of Edusave Scholarship (2018, 2020), Edusave Certificate of Academic Achievement (2019), and Li Kaiyan Progress Award (2020)
